How to do...

Preparing today for tomorrow

Maintenance after installation with WOCA Maintenance Paste - and regular maintenance

Maintenance Paste is used for annual or biannual, or when needed, maintenance of oiled wood floors after cleaning with Wood Cleaner. Maintenance of oiled floors can be done manually as well as with a polishing machine for large areas. The Maintenance Paste is also especially suitable also for UV oiled and oil waxed floors.

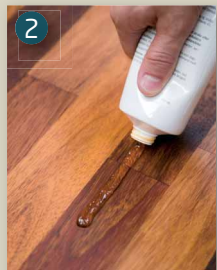

Clean

½ cup Wood Cleaner is mixed into 1 ½ gallons lukewarm water. Leave solution on surface to dissolve dirt if necessary.

Scrub with brush or pad manually or with floor machine if very dirty. Wipe clean with mop or cloth. Finish wipe a second time to minimize the exposure to water of surface. Repeat if floor is extremely dirty.

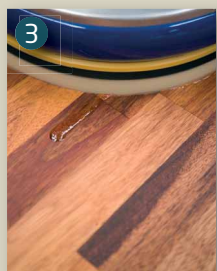

Tip: Always work with two buckets - one with Wood Cleaner mix with water and one with clear rinse water.

Apply

Leave the floor to dry and make sure that it is completely dry.

Apply thin coat of Maintenance Paste onto 10-20 sq. ft. floor at the time with white polishing pad or cotton cloth. Use floor machine for distribution of Maintenance Paste for large areas.

Polish

It is important that the Maintenance Paste is carefully polished into the wood. Continue polishing until the wood appears saturated and the surface looks uniform.

Risk of self-ignition! Due to the risk of self-ignition it is important that sanding dust and oil wetted cloths are soaked in water and disposed of in a tightly closed container after use.

Finish

Wipe the floor with clean, dry cotton cloths or with polish machine. There should not be left any excess paste left on the surface after polishing. Continue in sections until the floor has been finished.

When polishing with polishing machine the floor is pre-hardened after approx. 4 hours at 68 F and may cautiously be taken into use. Manually polished floors may be taken into use after approx. 24 hours. Do not expose the floor to water during the hardening time.

The easy way of maintaining and cleaning your oiled floors...

WOCA Oil Refresher is a very mild oil soap for easy cleaning and maintaining of oiled floors. Oil Refresher, Natural is typically used for natural colour oiled floors and Oil Refresher, White for white oiled wood floors.

Oil Refresher combines efficient cleaning with re-oiling as additional oil is penetrating into the wood of the floor forming a mat protective layer in the surface.

Always work with two buckets - one with Oil Refresher mixed with water and one with rinse clear water.

1. Shake the bottle well before use.
2. The floor must be free from dust before cleaning.
3. Mix Oil Refresher with lukewarm water: For UV-oiled and oil-waxed floors: 1:40 (¼ cup Oil Refresher into 1 ½ gallons of water). The mixture ratio can vary depending on wear and requirement.
4. It is recommended always to work with two buckets: one with Oil Refresher mixed with water and one with rinse water. Clean the floor with minimum quantity of water - leave oil refresher mixture on floor briefly in order to dissolve dirt. Remove dirty water with hard wrung mop or cloth and rinse out in bucket with rinse water. It is recommended to clean an area of approx. 100 sq. ft. at the time. Always wipe floor with Oil Refresher mixture on hard wrung mop or cloth in order to re-establish protective oil film on the surface.
5. Leave the floor to dry for approx. two hours before use.
6. If a light shine is wanted, polish the dry floor with a white pad.
